

How to download cctv footage

Insert your USB device into an available port at the front or back of the Dvr

1. Right click anywhere on the screen to bring up the menu box, and click menu at the top. (See image one)

2. A menu box should appear like the one on display in image 2. Select the Export icon.

3. Select the camera channel, Start time & date. End time & Date as displayed in image three an then click search. It will then search the files and display them like it does in image 4.

4. On the device name dropdown, select the usb Device that you have inserted. Then click the Export button.

5. You will be asked if you would like to select video & Log or Player. Click the video & Log. It will then show a progress bar. Once it has Completed it will display on the screen. Unplug your usb device and thats it.
